

Face Detection with HOG and SVM

Face Detection

Preprocessing

Face set (scaled as 36x36)

Non-Face set (scaled as 36x36 with different resolution)

Histograms of Oriented Gradients for Human Detection

Visualize HOG features

Different HOG size

HOG size is 6 pixels

HOG size is 6 pixels

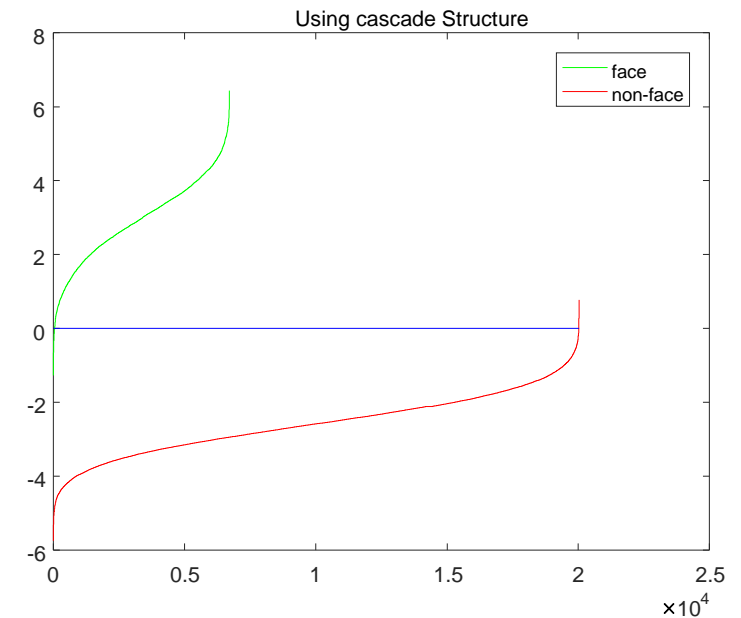

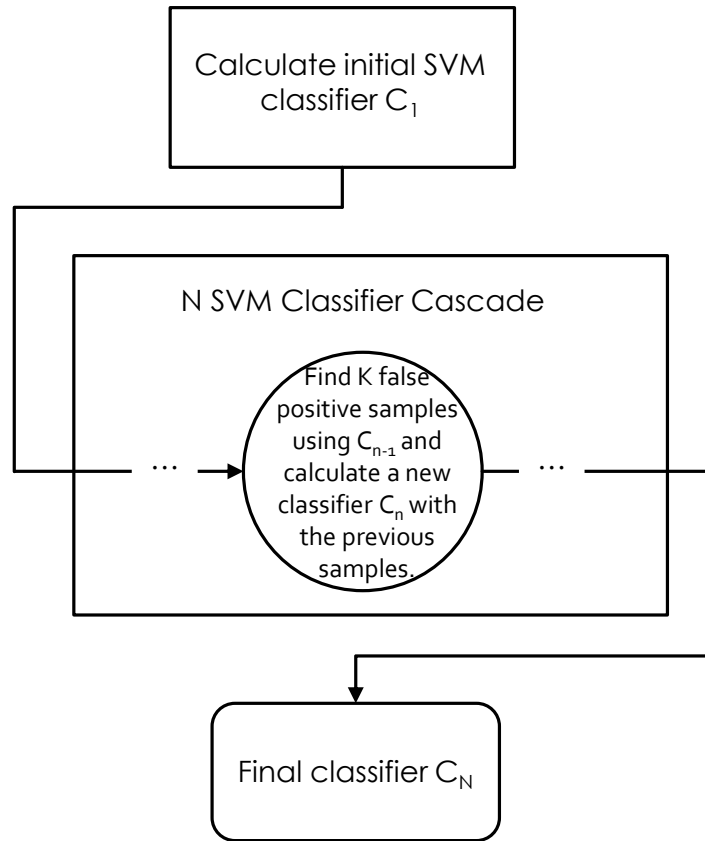

Support Vector Machine (SVM)

$$\begin{aligned} \min_{\mathbf{w}, b} \quad & \frac{1}{2} \|\mathbf{w}\|^2 \\ \text{s.t.} \quad & y_i(\mathbf{w}^T \mathbf{x}_i + b) \geq 1, \quad i = 1, 2, \dots, m. \\ L(\mathbf{w}, b, \alpha) = \quad & \frac{1}{2} \|\mathbf{w}\|^2 + \sum_{i=1}^m \alpha_i (1 - y_i(\mathbf{w}^T \mathbf{x}_i + b)) \end{aligned}$$

Cascade SVM Classifiers

Face Detection

HOG size is 6 pixels

SVM Layers	1	2	3	4	5
Precision	0. 56982	0. 87126	0. 90814	0. 82268	0. 84842
Recall	0. 79061	0. 74168	0. 73581	0. 78082	0. 78865

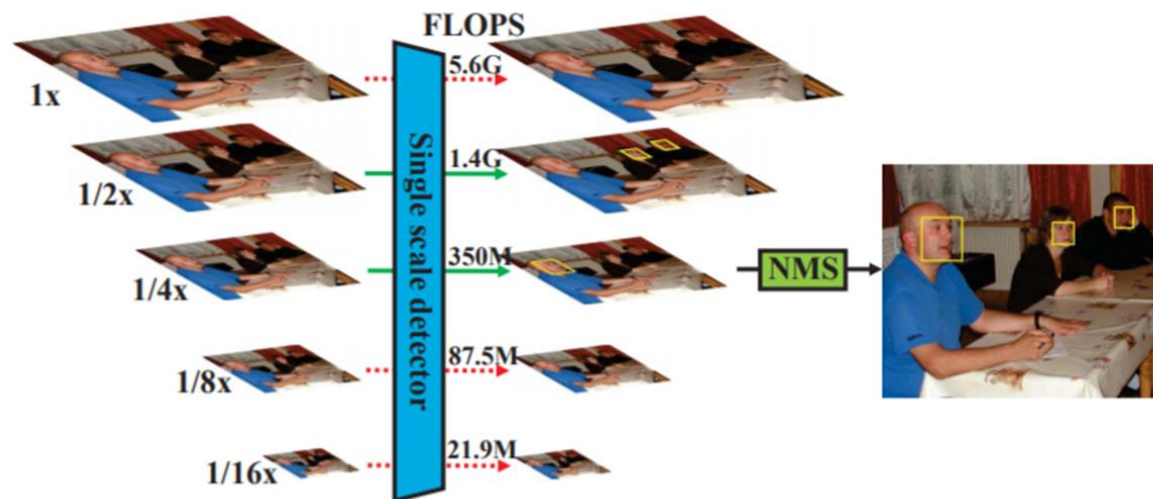

HOG size is 4 pixels

SVM Layers	1	2	3	4	5
Precision	0. 75436	0. 77757	0. 77890	0. 86667	0. 97606
Recall	0. 84736	0. 82779	0. 75147	0. 78865	0. 75930

Sliding Window and Image Pyramid

The window slides from the green frame to the right to the blue frame and slides to the red frame after multiple slides. Each time the window slides to a position, the image in the window will be detected whether it is a face or not.

An image pyramid is a multi-scale image representation that stores different sizes of the same image. (In this program, the target image is continuously downsampled (smoothed with double cubes) during use until the image size is smaller than the sliding window size)

Non-Maximum Suppression

Filter the results according to the following rules:

1. The test result with high score is preferentially retained.
2. The test results can overlap partially, but not too much.
3. The center of one test result cannot be within the range of another test result.
